

IHI Southwest Technologies, Inc.

IHI Southwest Technologies, Inc.:

IHI Southwest Technologies, Inc. (IHI) is a non-destructive examination (NDE) company, based out of San Antonio, Texas, USA. In 1999, IHI of Japan purchased the NDE field services department from Southwest Research Institute to actively market the high quality NDE services provided and research and development activities.

The IHI Global Team:

IHI Corporation of Japan (IHI Corp.) was established in 1853 and maintains 17 branches and sales offices in Japan, over 259 subsidiaries across the world and 15 offices in USA. With over 27,000 employees comprising the IHI team; IHI has positioned itself as an industrial technological leader throughout the world. IHI has expanded its business into various fields over the years, beginning with shipbuilding, then employing its expertise in mechanical engineering to develop and manufacture machinery for use on land and subsequently, extending its operations into the aerospace industry.

With the support of industry, IHI Corp. has opened the way to a new era. As we enter this new era, which will require an increasingly dynamic change achieved through innovative thinking, IHI is striving to improve its brand value by uniting the IHI Global team into a unified whole. The unique value that IHI offers is an ability to move quickly in shaping the future with fresh and unrestrictive thinking. Through successive eras, IHI has introduced fresh ideas that have astonished society by carefully honing precision technologies that have given shape to one high-quality product after another. The unchanging source of its strength is an indomitable and challenging spirit. IHI will continue to respond to the concerns of every customer with its flexible engineering capabilities and prompt responsiveness.

IHI an NDE Technology Leader:

- Provides high quality NDE inspection services, solutions, and products to the power, petroleum, chemical, and wind industries around the world
- Specializes in providing automated ultrasonic examination services primarily to the Nuclear Power Industry
- Designs and delivers state-of-the-art automated and robotic examination systems and equipment
- Provides NDE training and engineering services
- IHI is constantly examining and improving its methodologies, service processes, and operating systems to ensure the highest standards of service

IHI's Know-how:

- Phased Array Ultrasonic Technology
- Surface examinations Automated Eddy Current
- Computed and Digital Radiography
- Shearography
- State-of-the-art D&D technology
- Training, Qualification, and Certification
- Automated and remote NDE examinations
- Remote and Direct Visual Examinations
- Guided Wave Technology
- Precise CNC machining
- Equipment Design and Sales
- Inspection, Planning and Programming
